

LW2500 SKIS on PA18 with 1½" AXLES

Because of the clearance issues associated with the 1½ axles and brakes it is not possible to install the LW2500 Skis on that combination without making some adjustments.

With the use of a Cleveland 199-60 Wheel and Brake Kit, instead of a 199-62 Kit that is standard for these aircraft. One should be able to attain a decent fit.

The 199-60 Kit has a ¼" narrower disc and a different torque plate.

It is likely that the Cleveland 199-60 complete kit would work without any changes.

One can also use the 164-01501 Disc supplied in the 199-60 Kit in combination with the 199-62 Kit torque plates spaced ¼" outboard by using aluminum spacers.
